

Ullas Sreenivasan

Senior Software Engineer

Bengaluru, India • +91 9745410134 • usreenivasan.dev@gmail.com • <https://usreenivasan.pages.dev>

PROFILE

Senior Software Engineer with 8+ years of hands-on experience in front-end-focused full-stack development using TypeScript, JavaScript, Angular, React, Node.js, and Java Spring Boot, with 12+ years of overall software development experience. Proven expertise in building scalable enterprise applications, micro-frontends, microservices, REST APIs, and Azure cloud solutions. Strong in application architecture, performance optimization, TDD, CI/CD, and Agile delivery, with experience providing technical leadership and delivering end-to-end solutions across the application stack.

WORK EXPERIENCE

- | | |
|---------------------|---|
| Oct 2025 – Aug 2026 | Analyst - Software Designer, Globant • Bangalore <ul style="list-style-type: none">• Led Angular finance application development using schema-driven BFF architecture and reusable UI components.• Upgraded templates and configurable components to roll out screen variants without backend changes.• Integrated AI-assisted workflows, reducing feature delivery time by approximately 20%. |
| Aug 2024 – Oct 2025 | Delivery Project Lead, Mphasis • Bangalore <ul style="list-style-type: none">• Owned deployment execution for critical web applications, coordinating releases with cross-functional delivery teams.• Led code reviews and enforced development standards, reducing post-release defects by approximately 30%.• Supported reusable component adoption and post-launch issue resolution to maintain stable, performant applications. |
| Jul 2021 – Aug 2024 | Specialist - Software Engineering, LTI Mindtree • Bangalore <ul style="list-style-type: none">• Designed and integrated microservices within full-stack solutions to improve scalability and system resilience.• Solved complex frontend and backend problems through targeted analysis, refactoring, and architectural improvements.• Optimized infrastructure utilization and reduced operating costs by approximately 15% through capacity-focused engineering. |
| Sep 2019 – Jul 2021 | Senior Consultant, Capgemini • Bangalore <ul style="list-style-type: none">• Translated complex client requirements into clear technical specifications for delivery teams.• Integrated backend services with full-stack applications, aligning APIs with business workflows.• Applied engineering best practices that reduced Sev1/Sev2 production issues by approximately 30%. |
| Aug 2014 – Sep 2019 | Senior Software Developer, UST Global • Bangalore <ul style="list-style-type: none">• Owned full-stack solution design and implementation from initial concept through deployment and post-launch support.• Applied structured testing and engineering practices, reducing software defects by approximately 15%.• Produced technical documentation and implementation guides that improved maintenance and knowledge transfer across teams. |

PROJECTS

Present

Finastra - Trade Innovation

- Modernized the Import Letter of Credit (ILC) module by developing dynamic, schema-driven user interfaces utilizing a metadata-based rendering architecture.
- Designed and implemented intricate page and data schemas, enabling rapid UI development and seamless integration with backend services; constructed highly configurable UI screens using proprietary template engines and reusable component libraries.
- Operated within a Backend-for-Frontend (BFF) architecture, developing UI features initially with mock schemas and integrating production APIs upon availability.
- Developed and enhanced shared reusable UI components, extending template engine capabilities to support new business requirements and accelerate feature delivery across multiple modules.
- Collaborated extensively with cross-functional teams (backend developers, architects, business analysts, QA) in an Agile environment, ensuring high-quality releases through API integration, data mapping, debugging, and performance optimization.

Present

FedEx - Damage Package Tool

- Developed the FedEx Damage Package Tool (DPT), streamlining package damage reporting and enhancing loading quality monitoring during critical shipment phases.
- Designed and implemented intuitive UI screens compliant with 1DX standards, leveraging Angular 17, RxJS, and NgRx for robust, scalable, and maintainable application architecture.
- Integrated multi-language support for five distinct languages, significantly boosting global accessibility, and incorporated Quagga scanner and Okta authenticator for advanced functionality and fortified security protocols.
- Automated build, testing, and deployment workflows using Azure DevOps CI/CD pipelines, ensuring continuous delivery and rigorous quality assurance via comprehensive Karma/Jasmine unit test suites.

Present

Cisco - Supply Connection Workbench

- Developed the Cisco Supply Connection Workbench (SCW), a comprehensive platform for clients to monitor supplier performance, forecast, identify risks, and strategize business operations, also serving as a communication and training hub.
- Engineered scalable modules, components, and services leveraging Angular 15, ensuring a robust and maintainable application architecture.
- Contributed to the development of new features and successfully resolved critical production issues, guaranteeing continuous smooth operation and application reliability.
- Provided technical leadership through rigorous code reviews, enforcing quality and consistency standards across the development team.
- Designed and implemented enhanced templates for online documentation and training materials, significantly improving user understanding and adoption.
- Contributed to backend functionality enhancements through practical experience with the .NET Framework and configured Azure DevOps pipelines to automate build, testing, and deployment workflows, optimizing CI/CD processes.

Present

Cisco - Enterprise Data and Analysis

- Improved Cisco's Enterprise Data and Analysis (EDNA) platform by streamlining manual processes including onboarding, configuration, provisioning, and Software Image Management (SWIM) to scale network operations.
- Developed new front-end features in Angular, significantly enhancing application usability and functionality, while successfully managing critical Angular upgrades from v6 to v12, including dependency management.
- Constructed Java Spring Boot microservices to create robust REST controllers, enabling seamless API operations and efficient backend integration.
- Conducted task consolidation and rigorous code reviews to boost team efficiency, improve code maintainability, and ensure high code quality standards.
- Provided direct customer support through incident troubleshooting via support tickets and configured Azure App Configuration for centralized management of environment variables and deployment settings.

Present

Dell Technologies - API Marketplace

- Designed and developed the Dell Technologies API Marketplace, a comprehensive platform enabling API publication, categorization, management, and monetization for owners, and discovery, subscription, and integration for consumers.
- Engineered a scalable and user-friendly interface through the development of reusable UI components, modules, services, and templates.
- Implemented advanced micro-frontend applications utilizing React and Angular federation modules, showcasing cross-technology expertise and enabling modular, scalable feature integration.
- Secured the application through robust user authentication and authorization techniques, safeguarding critical data and access controls.
- Integrated the Stoplight web component for dynamic API documentation display and optimized the platform for seamless user experience across mobile and tablet devices.

Present

Dell Technologies - Digital License Fulfilment

- Streamlined the generation of license keys for network devices and systems (Dell, EMC, Broadcom) through the Digital License Fulfilment (DLF) application, providing critical status insights and efficient workflow management.
- Developed the core application, ensuring seamless and consistent data flow through effective communication across disparate servers.
- Engineered robust backend functionality leveraging Spring Boot microservices, significantly enhancing application scalability and maintainability.
- Contributed to strategic task efforts and prepared comprehensive impact analyses, guiding project outcomes and informing future development trajectories.

Present

Walmart - Transportation System

- Developed a comprehensive portal for Walmart's Transportation System, efficiently managing asset movement for inbound and outbound freight for partner vendors and carriers.
- Executed the migration of a legacy application by architecting and building a new decoupled front-end application utilizing Angular and Ionic framework.
- Delivered new application features aligned with evolving business requirements, consistently addressing user needs and project objectives.
- Resolved critical defects and performance bottlenecks, significantly enhancing application stability and overall user experience.
- Facilitated effective team collaboration and client alignment through active participation in stand-up calls and client meetings, ensuring successful project delivery.

Present	Princess Cruise - Passenger Experience • Architected and delivered the Princess Cruise Passenger Experience application, providing comprehensive ship and voyage information. • Integrated a broad suite of features including Room Service, Messenger App, Onboard Survey, Future Cruise Deposit, Internet Access, Ratings and Reviews, Shore Excursions, Gifts and Services, and Food and Beverages. • Developed and seamlessly integrated new application pages based on specified requirements, significantly enhancing overall functionality and user engagement. • Provided robust application support and efficiently resolved user issues, directly contributing to an improved passenger experience and augmented satisfaction.
